DETAILED ACTION

This communication is responsive to RCE filed 05/19/2010.

Information Disclosure Statement

Applicants' Information Disclosure Statement, filed 05/19/2010, has been received, entered into the record, and considered. See attached form PTO-1449.

Statement of Reasons for Allowance

Claims 1, 5 are allowed.

The following is an examiner's statement of reasons for allowance.

The present invention is directed to a method for assigning transmitting a media object through a network based on the physical capabilities of such a network. The media object is parsed into multiple partitions that are segmented are transmitted to a client, based on the availability of access points and resources at the client side and the network connections between such access points and a server transmitting such a media object.

Independent claim 1 recites, or similarly recites, in combination with the remaining elements, *transmitting said at least one segment using an assigned user datagram protocol port, wherein said at least two segments are sent to unique user datagram protocol ports at the same client device in parallel; notifying a master*

controller that a file partition handler has transmitted said at least one segment, wherein said master controller operates at least two file partition handlers where at least one segment of said partitioned media object' constituting a major segment, is broken into minor segments, each minor segment being assigned to a file partition handler by said master controller, wherein said minor segments are successfully transmitted by said at least two file partition handlers before a second major segment is broken into minor segments and transmitted by said file partition handlers, wherein said master controller keeps track of lost segments not successfully transmitted in a linked list, wherein said master controller causes said file partition handler responsible for said lost segment to retransmit said lost segment, wherein said master controller reassigns said segment of said partitioned media object to a second file partition handler in response when said file partition handler fails to deliver said segment, wherein said master controller communicates with a second master controller using a Transmission Control Protocol and Internet Protocol based transmission scheme, and said file partition handlers communicates with a server using UDP ports; and assigning an additional segment of said partitioned media object to said file partition handler for transmission.

The closest prior art, Duanet al (US 7,143,433), in view of Jerding et al (US 7,010,801) show similar Video distribution systems using dynamic segmenting of video data files. However, prior art of record neither renders obvious nor anticipates the combination of claimed elements in light of the specification. After a further search and a thorough examination of the present application and in light of the prior art made of record, claims are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
